To: ham-digital@ucsd.edu

I'm interested in any research done into on-the-fly data compression to
achieve greater effective throughput for packet radio. It seems to me that
this might be a field ripe for investigation.

Hi,
Has anyone got the connections to hook up a
KDK model FM240 2m transciever to a BayCom
packet modem.

Thanks

To: ham-digital@ucsd.edu

Anybody know where I can grab a copy of the latest incarnation of JNOS (by Johan, WG7J)? I've seen JN110x10.ZIP on hydra.carleton.ca (which iz only source coode, no .EXEs). Is that the latest? Has anybody played with a compiled version yet? Is there one available anyplace for anonymous FTP or BBS download? (And, BTW, is there a compiled .EXE of that version *without* NetROM?)

Me not a C compiler person, so I'd like to grab a working model.

Thanks!

:

Johan has placed the latest sources and a compiled executable on
ftp.ece.orst.edu in the /pub/ham/wg7j directory.
Several folks have already tried it, and found it to be quite buggy. The
mail indexing program does not work, the system locks up during forwarding,
and the whole thing is rife with memory leaks.

Still, it looks like it will be really nice once the problems are tracked
down and corrected. He has added an smtp tdisc command, and forwarding
will be driven by the indexes, which should speed things up considerably.

I would recommend staying with 110x9 for the time being.

I assume you're talking about a packet bbs? My opinion is that a pbbs
sysop has the right to delete any type of message he wants. It's his
equipment and his license.

I haven't seen his message, but as far as I am concerned, the final say as to
what is on my BBS is entirely *mine*. I am not sure what the USA regs are, but
my BBS is run under a variation of *my* licence.
